

Future of Planning – AI Compliance

CHARTER for Artificial Intelligence and Compliance – Breakthrough USP of rPlan

Challenges being envisaged by Industry Today:

- **Dynamic risks:** Factors like fluctuating weather, geopolitical instability, and supply chain disruptions create unpredictable project risks.
- **Scheduling complexity:** Creating effective project schedules requires highly skilled human expertise, and delays often cascade into massive time and cost overruns.
- **Resource shortages:** Labor shortages, particularly in specialized areas like structural engineering, slow project progress.
- **Safety risks:** Ensuring worker safety while adhering to deadlines remains a constant struggle

How is AI Shaping other industries:

Every industry, every trade show, every office, every developer etc is now gearing up to move to the next technological leap which is being rather usurped by **Artificial Intelligence**. Project Management in construction and maintenance has been at a rather shy pace all along but the pressure from AI will not spare us.

Where is the ray of hope:

- AI can help us reduce a lot of donkey work
- Experience shows that there is voluminous historical data of curated quality already residing with all Primavera users across the world

How to apply:

- Planned, current and forecast data converted into real time “Actual Snapshots” is the GOLD MINE in P6 backed industries

How rPlan is Assisting:

- We are already into advanced stages of upgrading our know-how in AI Tools, Prompt Engineering and Data curation
- rPlan is in possession of voluminous data from three decades of experience operating in several versions of Primavera all the way from P3 to P6 developed and achieved in the Energy Industry Globally
- rPlan has full cycle implementation experience in projects from across the globe

Future of Planning – AI Compliance

CHARTER for Artificial Intelligence and Compliance – Breakthrough USP of rPlan

- rPlan is starting to assist its future clients develop plans and monitor them real time using some smart technological tools
- rPlan's foremost prowess is that that work on very flexible remotely positioned teams who bring in their best of experience to curate project management exercises

Our Focus Areas with AI implementation

- Accelerated decision making
- Proactive risk mitigation
- Cost optimization
- Risk management on projects of critical importance shall be managed using allied oracle products like SAFRAN-Risk in near future
- Resource pool optimization and resource sharing across the globe
- Remote project controls across the globe
- Corroboration of globally positioned teams on remote projects
- In specific reference to P6 and Oracle products, the Agentic Agents promoted by the group shall be utilized for near future implementations
- Etc.....
